

Z•3

Refashion the panel system

ZenPro™

Panel system from a different perspective

Take out the bulk + take on the slim = same functions + lighter appearance

If you find your current office settings need a breath of fresh face, Z-3 is the answer. Cloned from our best seller ZEN•T tile system, Z-3 is evolutionized to make an entry into the market with its killer feature - 3cm panel width.

Z-3 trims down the bulky architecture of the regular tiling system without compromising its core functionalities. You can now aspect to have more space to play with your interior layouts.

This Combination :

Main frames:

Spine frame - 650mm metal-embossed steel 3cm thin panel
Section divider - ZEN•T's 650mm upholstered panels

Screens:

3cm-width polycarbonated tiles for allowing brightening of work area

Desk legs:

Curve metal-cast leg with footing options of levelling glides or castors

Pedestal:

Metal pedestal with smooth edges transition and castors for mobility.

Ingenious space illusion

If simplicity is your personality, Z-3 INGENUITY would meet your target effortlessly. Created with 1050mm panels in two equal ratios, it is intended to erect an managerial workstation with 'less line' formations. The use of full height glass would further reduces visual clutter, thus making an executive station less confining and visibly spacious. With less panels used, Z-3 can help to translate your inventory investment book figures a lot less 'zeros'.

This combinations :

Overview of

Power & Data Management

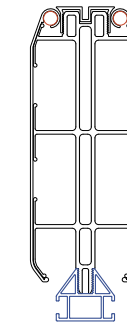

Managing cables is like managing traffic, a painful exercise but one that needs to be done. The success of a system hinges on the success of its flow and distribution.

Cable configurations made flexible and easy. No halting of work. No disturbance to daily operations.

Engineered to house three times more than the regular capacity, the 2-tier under deck beltlines transport up to 12 power lines, 6 data (networks and telephone) and 6 sockets.

Z-3 junction brackets can house up to 10 conduits at one time. This impressive capacity is usually only available with bulky panels that are twice, or more often, three times the thickness of Z-3.

Below deck power belt can be added on to serve as central channels that links between stations.

Z-3 masterpiece 3cm-thin panels at 1600mm

Power poles for channeling cables from ceiling or floor - a typical wiring management layout common in large scale organizations.

For freestandings, cables can be channelled from the floor and encased in sleeky detachables vertical beltline.

Metal junction brackets spread across the beltline in calculated distances to enable proper segregation of cable into orderly parallel lanes.

The sleeky flip-up power hatch provides perfect cable concealment.

Data and power can be drawn to individual stations via personal mini posts, tugged nicely and neatly under deck. (Right insert)
